Progressive Education Society's Modern College of Arts, Science and Commerce, Shivajinagar, Pune 5 (An Autonomous College Affiliated to Savitribai Phule Pune University)

# **Detailed Syllabus**

# **For M.Sc. (Computer Application)**

# (2019-20 Course)

(with effect from 2019-20)

# **Course Code :** 19ScCMAP101 (Core) **Course Name :** Design and Analysis of Algorithms

## **Teaching Scheme: TH:4Hours/Week Examination Scheme: CIA : 50 Marks**

Credits :04 End-Sem : 50 Marks

#### **Prerequisites:**

- Basic knowledge of algorithms and programming concepts
- Data Structures and Advanced Data Structures
- Basic Knowledge of Graphs and Algorithms

#### **Course Objectives:**

- To design the algorithms
- To select the appropriate algorithm by doing necessary analysis of algorithms
- To learn basic Algorithm Analysis techniques and understand the use of asymptotic notation ,Understand different design strategies

#### **Course Outcomes:**

On completion of the course, student will be able to-

- Analyze the problem and develop the algorithm
- Classify the problem and apply the appropriate design strategy to develop algorithm
- Design algorithm in context of space and time complexity and apply asymptotic notation

| Chapter   | Title   | Number of |
|-----------|---|-----------|
|           |   | Lectures  |
| Chapter 1 | Basics of Algorithms                                  | 8         |
|           | 1.1.Algorithm definition and characteristics          |           |
|           | 1.2.Spacecomplexity                                   |           |
|           | 1.3.Time complexity, worst case-best case-average     |           |
|           | case complexity, asymptotic notation                  |           |
|           | 1.4.Recursive and non-recursive algorithms            |           |
|           | 1.5.Sorting algorithms (insertion sort, heap sort,    |           |
|           | Bubble sort)  |           |
|           | 1.6.Sorting in linear time: counting sort, concept of |           |
|           | bucket and radix sort                                 |           |
|           | 1.7 Searching algorithms: Linear, Binary              |           |
| Chapter 2 | Divide and conquer strategy                           | 4         |

|           | 2.1 General method control abstraction            |    |
|-----------|---|----|
|           | 2.7 Binarysearch                                  |    |
|           | 2.3 Merge sort Ouicksort                          |    |
|           | 2.4 Comparison between Traditional method of      |    |
|           | 2.4.Comparison between Traditional method of      |    |
|           | Matrix Multiplication vs.                         |    |
|           | Strassen's Matrix Multiplication                  |    |
| Chapter 3 | Greedy Method                                     | 10 |
|           | 3.1.Control Abstraction                           |    |
|           | 3.2. Knapsack problem                             |    |
|           | 3.3.Job sequencing with deadlines.                |    |
|           | 3.4. Minimum-cost spanning trees:                 |    |
|           | Kruskal and Prim's algorithm                      |    |
|           | 3.5. Optimal storage on tapes                     |    |
|           | 3.6.Optimal merge patterns                        |    |
|           | 3.7.Huffman coding                                |    |
|           | 3.8. Shortest Path: Dijkstra's algorithm          |    |
| Chapter 4 | Dynamic Programming                               | 7  |
| •         | 4.1.Principle of optimality                       |    |
|           | 4.2. Matrix chain multiplication                  |    |
|           | 4.3.0/1 Knapsack Problem                          |    |
|           | 4.3.1.Merge & Purge                               |    |
|           | 4.3.2. Functional Method                          |    |
|           | 4.4. Concept of Shortest Path                     |    |
|           | 4.4.1.Single Source shortest path                 |    |
|           | 4.4.2.Diikstra's Algorithm                        |    |
|           | 4.4.3.Bellman Ford Algorithm                      |    |
|           | 4.4.4. All pairs Shortest Path                    |    |
|           | 4.4.5. Floyd- Warshall Algorithm                  |    |
|           | 4 4 6 Longest common subsequence                  |    |
|           | 4 4 7 String editing                              |    |
|           | 4 4 8. Travelling Salesperson Problem             |    |
| Chapter 5 | Decrease and Conquer:                             | 5  |
|           | 5.1. Definition of Graph                          | •  |
|           | 5.2 Representation of Graph                       |    |
|           | By - DFS and BFS                                  |    |
|           | 5.2. Topological sorting                          |    |
|           | 5.3. Connected components and spanning trees      |    |
|           | 5.4. By Variable Size decrease Euclid's algorithm |    |
|           | 5.5. Flow in graph                                |    |
|           | 5.6. Articulation Point and Bridge edge           |    |
| Chapter 6 | Backtracking                                      | 5  |
|           | 6.1. General method                               |    |
|           | 6.2. Fixed Tuple vs. Variable Tuple Formulation   |    |
|           | 6.3. n- Queen's problem                           |    |
|           | 6.4. Graph coloring problem                       |    |
|           | 6.5. Hamiltonian cycle                            |    |
|           | 6.6. Sum of subsets                               |    |
| Chapter 7 | Branch and Bound                                  | 5  |
|           | 7.1. Introduction                                 |    |
|           | 7.2. Definitions of LCBB Search                   |    |
|           | 7.3. Bounding Function, Ranking Function          |    |
|           | 7.4. FIFO BB Search                               |    |

|           | 7.5. Traveling Salesman problem Using Variable   |   |
|-----------|--|---|
|           | tuple  |   |
|           | 7.6. Formulation using LCBB  |   |
|           | 7.7. 0/1 knapsack problem using LCBB   |   |
| Chapter 8 | Problem Classification   | 3 |
|           | 7.3 Nondeterministic algorithm   |   |
|           | 7.4 The class of P, NP, NP-hard and NP – Complete  |   |
|           | problems   |   |
|           | 7.5 Cook's theorem   |   |
| Chapter 9 | Experiential Learning  | 1 |
|           | <ul> <li>9.1 Search n number of cities on Google map and find shortest route,</li> <li>9.2 Consider any stable algorithms which are in currently use and find out space Complexity, sTime Complexity and control abstraction.</li> </ul> |   |

# Course Code : 19ScCMAP102 (Elective) Course Name : .NET

# **Teaching Scheme: TH: 4 Hours/Week Examination Scheme: CIA : 50 Marks**

Credits : 04 End-Sem : 50 Marks

#### **Prerequisites :**

- Knowledge of object-oriented programming concepts such as data abstraction, encapsulation, inheritance, and polymorphism
- Familiarity with programming language such as C++ and/or Java
- Knowledge of web development

#### **Objectives:**

- To understand the DOTNET framework,
- C# language features
- Web development using ASP.NET

#### **Course Outcome:**

- Students able to learn c# fundamentals
- Students develop web-sites using .NET framework

| Chapter   | Title  | Number of |
|-----------|--|-----------|
|           |  | Lectures  |
| Chapter 1 | DOTNET Framework   | 2         |
|           | <b>1.1</b> Introduction to DOTNET                          |           |
|           | <b>1.2</b> DOT NET class framework                         |           |
|           | <b>1.3</b> Common Language Runtime                         |           |
|           | <b>1.3.1</b> Overview                                      |           |
|           | <b>1.3.2</b> Elements of .NET application                  |           |
|           | <b>1.3.3</b> Memory Management                             |           |
|           | <b>1.3.4</b> Garbage Collector : Faster Memory allocation, |           |
|           | Optimizations  |           |
|           | <b>1.4</b> Common Language Integration                     |           |
|           | <b>1.4.1</b> Common type system                            |           |
|           | <b>1.4.2</b> Reflection API                                |           |
|           | <b>1.5</b> User and Program Interface                      |           |
| Chapter 2 | Introduction to C#   | 6         |
|           | 2.1 Language features                                      |           |
|           | <b>2.1.1</b> Variables and Expressions,                    |           |
|           | type conversion  |           |

|           | 2.1.2 Flow Control  |   |
|-----------|---|---|
|           | 2.1.3 Functions. Delegates                                    |   |
|           | <b>2.1.4</b> Debugging and error handling, exception handling |   |
|           | (System Defined and User Defined)                             |   |
|           | 2.2 Object Oriented Concepts                                  |   |
|           | <b>2.2.1</b> Defining classes, class members, Interfaces,     |   |
|           | properties  |   |
|           | <b>2.2.2</b> Access modifiers, Implementation of class,       |   |
|           | interface and properties                                      |   |
|           | <b>2.2.3</b> Concept of hiding base class methods, Overriding |   |
|           | <b>2.2.4</b> Event Handling                                   |   |
|           | <b>2.3</b> Collections, Comparisons and Conversions           |   |
|           | <b>2.3.1</b> Defining and using collections,                  |   |
|           | 2.3.2 Indexers, iterators                                     |   |
|           | <b>2.3.3</b> Type comparison, Value Comparison                |   |
|           | <b>2.3.4</b> Overloading Conversion operators, as operator    |   |
|           | 2.4 Generics  |   |
|           | 2.4.1 Using generics  |   |
|           | 2.4.2 Defining Generics, generic Interfaces, Generic          |   |
|           | methods, Generic Delegate                                     |   |
| Chapter 3 | Window Programming  | 5 |
|           | 3.1 Window Controls   |   |
|           | <b>3.1.1</b> Common Controls                                  |   |
|           | 3.1.2 Container Controls                                      |   |
|           | 313 Menus and Toolbars  |   |
|           | <b>21</b> <i>A</i> Drinting                                   |   |
|           | 3.1.4 Finning   |   |
|           | <b>5.1.5</b> Dialogs  |   |
|           | 3.2 Deploying Window Application                              |   |
|           | <b>3.2.1</b> Deployment Overview                              |   |
|           | <b>3.2.2</b> Visual studio setup and Deployment               |   |
|           | project types   |   |
|           | <b>3.2.3</b> Microsoft windows installer architecture         |   |
|           | <b>3.2.4</b> Building the project : Installation              |   |
| Chapter 4 | Data Access   | 2 |
|           | <b>4.1</b> File System Data                                   |   |
|           | <b>4.2</b> .XML   |   |
|           | <b>4.3</b> Databases and ADO.NET                              |   |
|           | <b>4.4</b> Data Binding                                       |   |
| Chapter 5 | Web Programming   | 2 |
|           | 5.1 Basic Web programming                                     | = |
|           | 5.2 Advanced Web programming                                  |   |
|           | 5.3 Web Services  |   |
|           | 5 4 Deployment Web applications                               |   |
|           |   |   |
| Chapter 6 | .NET Assemblies   | 4 |

|  | 6.1 Components  |                            |
|--|---|----------------------------|
|  | 6.2 .NET Assembly features  |                            |
|  | <b>6.3</b> Structure of Assemble  |                            |
|  | <b>6.4</b> Calling assemblies private and shared  |                            |
|  | assemblies  |                            |
|  |   | 2                          |
| Chapter 7  | Networking  | 3                          |
|  | 7.1 Networking overview   |                            |
|  | 7.2 Networking programming options  |                            |
|  | 7.2.1 Webclient   |                            |
|  | <b>7.2.2</b> WebRequest and WebResponse   |                            |
|  | 7.2.3 TcpListener &TcpClient  |                            |
| Chapter 8  | Introduction to GDI+  | 3                          |
|  | <b>8.1</b> Overview of Graphical Drawing  |                            |
|  | <b>8.2</b> Pen Class, Brush Class, Font Class   |                            |
|  | 8.3 Using Images  |                            |
|  | <b>8.4</b> Clipping, Drawing2D, Imaging   |                            |
| Chapter 9  | Introduction to ASP.NET   | 2                          |
| Chapter 10   | Server Controls and Variables, control Structures   | 2                          |
|  | & Functions   |                            |
|  | <b>10.1</b> Forms, webpages, HTML forms, Webforms   |                            |
|  | <b>10.2</b> Request & Response in Non-ASP.NET pages   |                            |
|  | 10.3 Using ASP.NET Server Controls  |                            |
|  | <b>10.4</b> Datatypes : Numeric, text, arrays,  |                            |

# Course Code : 19ScBCAU103<br/>Course Name : Web Programming-ITeaching Scheme: 4 Lectures/WeekCredits: 4Examination Scheme: CIA : 50 MarksEnd-Sem : 50 Marks

#### **Desirable Prerequisites:**

- Basic knowledge in HTML
- Tags & skill of creating web pages should be known
- Knowledge of basic Computer hardware & software is also necessary

#### **Course Objectives:**

- Define the basics in web design
- Visualize the basic concept of HTML, XML
- Introduce concept of CSS

#### **Course Outcomes:**

On completion of the course, student will be able to-

- Implement interactive web page(s) using HTML, CSS, XML
- Design a responsive web site using HTML5 and above, CSS3 and above and XML

| Chapter | Title                                     | Number of |

# Course Code : 19ScCMAP105 (Elective) Course Name : Software Development Engineering in Testing

#### **Teaching Scheme: TH:4Hours/Week Examination Scheme: CIA : 50 Marks**

Credits : 04 End-Sem : 50 Marks

Prerequites : Knowledge of Software Engineering

#### **Objectives :**

- Understanding software development life cycle
- Understanding Security testing

#### Course outcome

On completion of the course, students will be able to

- Learn the different types of testing tools
- Apply the tools to write test cases and use different testing tools

| Chapter   | Title  | Number of<br>Lectures |
|-----------|--|-----------------------|
| Chapter 1 | SDLC   | 4                     |
|           | <ul> <li>1.1 What is Software development life cycle?</li> <li>1.2 Phases of SDLC</li> <li>1.3 Models of SDLC-Waterfall, Agile and Agile<br/>Scrum</li> <li>1.4 What is the difference between Waterfall and Agile?</li> <li>1.5 Advantages of using Agile Over Waterfall</li> <li>1.6 Agile Scrum and Lean Model</li> <li>1.7 User story, Story Points, Product backlog, Sprint<br/>backlog, Roles and responsibility of a scrum master<br/>and Product owner</li> <li>1.8 Meetings conducted in Agile Scrum</li> </ul> |                       |
| Chapter 2 | Types of Testing   | 10                    |
|           | <ul> <li>2.1 Static Testing/ Dynamic Testing</li> <li>2.2 Regression/ Retesting</li> <li>2.3 Usability/ accessibility</li> <li>2.4 Smoke / Sanity testing</li> <li>2.5 Chapter Testing/ Integration Testing/ System<br/>Testing</li> <li>2.6 UAT – Alpha Testing /Beta Testing</li> <li>2.7 White Box/Black box testing</li> <li>2.8 Functional/Non-functional Testing</li> <li>2.9 Performance Testing</li> </ul>   |                       |

|                        | 2.10 Load Testing  |                |
|------------------------|--|----------------|
|                        | 2.11 Stress Testing  |                |
|                        | 2.12 Penetration Testing   |                |
|                        | 2.13 Cross platform / Cross device testing   |                |
| Chapter 3              | STLC (Software Testing Life Cycle)   | 5              |
|                        | 3.1 Test Planning  |                |
|                        | 3.2 Test Plan  |                |
|                        | 3.3 What is a test Plan  |                |
|                        | 3.4 Who creates a Test Plan  |                |
|                        | 3.5 When is the Test Plan created  |                |
|                        | 3.6 Purpose of creating a Test Plan  |                |

# Progressive Education Society's Modern College of Arts, Science and Commerce (Autonomous) Shivajinagar, Pune - 5 First Year of B.C. A. (Science) (2019 Course) Course Code : 19ScCMAP106 Course Name : Advanced Database Concepts

# Teaching Scheme: 4 Lectures/WeekCredits: 4Examination Scheme: CIA :50 MarksEnd-Sem : 50 Marks

#### **Prerequisite:**

• Basic knowledge of database concepts is desirable

#### **Course Objectives:**

- Understand the role of a database management system in an organization.
- Understand basic database concepts, including the structure and operation of the relational data model.
- Construct simple and moderately advanced database queries usingStructured Query Language (SQL).
- Describe and discuss selected advanced database topics, such as Parallel database and distributed database.
- Understand the role of the database administrator.

#### **Course Outcomes:**

On completion of the course, student will be able to-

- Have a broad understanding of database concepts and database management system software
- Have a high-level understanding of major DBMS components and their function
- Be able to model an application's data requirements using conceptual modeling tools like ER diagrams and design database schemas based on the conceptual model
- Be able to write SQL commands to create tables and indexes, insert/update/delete data, and query data in a relational DBMS
- Be able to program a data-intensive application using DBMS APIs

| Chapter No. | Title                             | No. of Lectures |
|-------------|-----------------------------------|-----------------|
| Chapter 1   | Introduction to Database Systems  | 8               |
|             | 1.1 Data                          |                 |
|             | 1.2 Information                   |                 |
|             | 1.3 Database                      |                 |
|             | 1.4 DBMS                          |                 |
|             | 1.5 Data Dictionary               |                 |
|             | 1.6 File system Vs. DBMS          |                 |
|             | 1.7 Advantages & Disadvantages of |                 |
|             | DBMS                              |                 |
|             | 1.8 View of Data                  |                 |
|             | 1.9 Database Languages            |                 |
|             | 1.10 Data Models                  |                 |
|             | 1.11 Levels of Abstraction        |                 |

|           | 1.12 Data Independence   |    |
|-----------|--|----|
|           | 1.13 Database Architecture   |    |
| Chapter 2 | Relational Algebra Operation   | 3  |
|           | 2.1 Select   |    |
|           | 2.2. Project   |    |
|           | 2.3. Union   |    |
|           | 2.4. Difference  |    |
|           | 2.5. Intersection  |    |
|           | 2.6. Cartesian Product   |    |
|           | 2.7. Natural Join  | _  |
| Chapter 3 | OODBMS & ORDBMS  | 5  |
|           | 3.1 Overview of Object-Oriented concepts   |    |
|           | & characteristics  |    |
|           | 3.2 Objects, OIDs and reference types  |    |
|           | 3.3 Database design for ORDBMS   |    |
|           | 3.4 Comparing RDBMS, OODBMS &  |    |
|           | ORDBMS   |    |
|           |  | 0  |
| Chapter 4 | Advanced Database Management   | 8  |
|           | System – Concepts & Architecture   |    |
|           | 4.1 Spatial data management  |    |
|           | 4.2 Web based systems  |    |
|           | 4.2.1 Overview of client server  |    |
|           | architecture,  |    |
|           | 4.2.2 Databases and web architecture,  |    |
|           | N-tier Architecture, Business  |    |
|           | logic – SOAP   |    |
|           | 4.3 Multimedia databases   |    |
|           | 4.4 Mobile database  | 1  |
| Chapter 5 | Query Processing   | 6  |
|           | 5.1 Steps for processing a query   |    |
|           | 5.2 Sorting  |    |
|           | 5.3 Join Operation   |    |
|           | 5.3.1 Nested Loop Join   |    |
|           | 5.3.2 Block Nested Loop Join   |    |
| Chapter 6 | Devellel detebages   | 7  |
| Chapter 0 | 6 1 Introduction   | Ι  |
|           | 6.2 Parallal database architecture   |    |
|           | 6.3 I/O parallelism  |    |
|           | Inter query and Intra query parallelism  |    |
|           | Intra-operational parallelism  |    |
|           | 6 4 Design of parallel systems   |    |
| Chapter 7 | Distributed Databases  | 10 |

# **Course Code :** 19ScCMAP201 **Course Name : Advanced Operating Systems**

# Teaching Scheme: 4 Lectures/WeekCredits: 4Examination Scheme: CIA : 50 MarksEnd-Sem : 50 Marks

#### **Prerequisites:**

- Knowledge of Basic Operating System Concepts
- General knowledge of operating systems
- Basic Computer Architecture concepts

#### **Course Objectives:**

- To understand design issues related to process management
- To understand design issues related to memory management
- To understand design issues related to File management
- To study, learn, and understand the main concepts of advanced operating systems
- To study threads management.
- Focuses on Operating system structuring
- Study of Synchronization, communication and scheduling in parallel systems

#### **Course Outcomes:**

On completion of the course, student will be able to-

- Describe the concept of process and memory management
- Get the knowledge of process synchronization
- Identify use and evaluate the storage management policies with respect to different storage management technologies.
- Study and to control the behavior of OS by writing Shell scripts.

| Chapter No. | Title                                     | Number of |
|-------------|---|-----------|
|             |   | Lectures  |
| Chapter 1   | Introduction                              | 6         |
|             | 1.1 Definition                            |           |

|             | 1.5 Introduction to UNIX OS               |           |
|             | 1.6 Architecture of UNIX                  |           |
|             | 1.7 Basics of navigating UNIX environment |           |

|                        | 1.8 Introduction to UNIX file system   |   |
|------------------------|--|---|
|                        | 1.9 File system layout   |   |
|                        | 1.10 Files and directory management  |   |
|                        | 1.11 Processes and process management  |   |
| Chapter 2              | Process Management   | 4 |
| •                      | 2.1 Process Concept – The process, Process   |   |
|                        | states, Process control block  |   |
|                        | 2.2 Process Scheduling – Scheduling queues,  |   |
|                        | Schedulers, context switch   |   |
|                        | System Calls: definition, implementation   |   |
|                        | 2.3 Operations on Process – Process creation   |   |
|                        | with program using fork(), Process   |   |
|                        | termination  |   |
|                        |  |   |
| Chapter 3              | CPU scheduling   | 6 |
|                        | 3.1 Basic Concept – CPU-I/O burst cycle,   |   |
|                        | CPU scheduler, Preemptive scheduling,  |   |
|                        | Dispatcher   |   |
|                        | 3.2 Scheduling Criteria  |   |
|                        | 3.3 Scheduling Algorithms – FCFS, SJF,   |   |
|                        | Priority scheduling, Round-robin   |   |
|                        | scheduling, Multiple queue scheduling,   |   |
|                        | Multilevel feedback queue scheduling   |   |
|                        |  |   |
| Chapter 4              | Memory Management  | 8 |
|                        | 4.1 Background – Basic hardware, Address   |   |
|                        | binding, Logical versus physical address   |   |
|                        | anaga Dynamia loading Dynamia linking  |   |
|                        | space, Dynamic loading, Dynamic linking  |   |
|                        | space, Dynamic loading, Dynamic linking<br>and shared libraries  |   |
|                        | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation Memory</li> </ul>  |   |
|                        | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation – Memory<br/>mapping and protection, Memory allocation</li> </ul>  |   |
|                        | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation – Memory<br/>mapping and protection, Memory allocation,<br/>Fragmentation</li> </ul>   |   |
|                        | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation – Memory<br/>mapping and protection, Memory allocation,<br/>Fragmentation</li> <li>4.4 Paging – Basic Method, Hardware support.</li> </ul>   |   |
|                        | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation – Memory<br/>mapping and protection, Memory allocation,<br/>Fragmentation</li> <li>4.4 Paging – Basic Method, Hardware support,<br/>Protection, Shared Pages</li> </ul>  |   |
|                        | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation – Memory<br/>mapping and protection, Memory allocation,<br/>Fragmentation</li> <li>4.4 Paging – Basic Method, Hardware support,<br/>Protection, Shared Pages</li> <li>4.5 Segmentation – Basic concept.</li> </ul>   |   |
|                        | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation – Memory<br/>mapping and protection, Memory allocation,<br/>Fragmentation</li> <li>4.4 Paging – Basic Method, Hardware support,<br/>Protection, Shared Pages</li> <li>4.5 Segmentation – Basic concept,</li> <li>4.6 Virtual Memory Management – Background,</li> </ul>  |   |
|                        | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation – Memory<br/>mapping and protection, Memory allocation,<br/>Fragmentation</li> <li>4.4 Paging – Basic Method, Hardware support,<br/>Protection, Shared Pages</li> <li>4.5 Segmentation – Basic concept,</li> <li>4.6 Virtual Memory Management – Background,<br/>Demand paging, Performance of demand</li> </ul>   |   |
|                        | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation – Memory<br/>mapping and protection, Memory allocation,<br/>Fragmentation</li> <li>4.4 Paging – Basic Method, Hardware support,<br/>Protection, Shared Pages</li> <li>4.5 Segmentation – Basic concept,</li> <li>4.6 Virtual Memory Management – Background,<br/>Demand paging, Performance of demand<br/>paging, Page replacement – FIFO, OPT,</li> </ul>   |   |
|                        | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation – Memory<br/>mapping and protection, Memory allocation,<br/>Fragmentation</li> <li>4.4 Paging – Basic Method, Hardware support,<br/>Protection, Shared Pages</li> <li>4.5 Segmentation – Basic concept,</li> <li>4.6 Virtual Memory Management – Background,<br/>Demand paging, Performance of demand<br/>paging, Page replacement – FIFO, OPT,<br/>LRU, Second chance page replacement</li> </ul>   |   |
| Chapter 5              | <ul> <li>space, Dynamic loading, Dynamic linking<br/>and shared libraries</li> <li>4.2 Swapping</li> <li>4.3 Contiguous Memory Allocation – Memory<br/>mapping and protection, Memory allocation,<br/>Fragmentation</li> <li>4.4 Paging – Basic Method, Hardware support,<br/>Protection, Shared Pages</li> <li>4.5 Segmentation – Basic concept,</li> <li>4.6 Virtual Memory Management – Background,<br/>Demand paging, Performance of demand<br/>paging, Page replacement – FIFO, OPT,<br/>LRU, Second chance page replacement</li> </ul>   | 6 |

# **Course Code :** 19ScCMAP202 **Course Name : Information System Security**

# Teaching Scheme:4 Lectures/WeekCredits:4Examination Scheme:CIA:50 MarksEnd-Sem:50 Marks

#### Prerequisites

• Knowledge of Information Systems

#### **Course Objectives**

• To enable students to get sound understanding of Information system security and cryptography

#### **Course Outcomes**

On completion of the course, student will be able to-

• Equip Knowledge and skills for career in Information Security

| Chapter No. | Title   | Number of<br>Lectures |
|-------------|---|-----------------------|
| Chapter 1   | Conceptual Foundation of Information<br>Systems Security  | 3                     |
|             | <ul> <li>1.1 Concepts and Terminology: Threats, Attacks,<br/>Vulnerabilities, Risks, Risk Assessment and<br/>Mitigation</li> <li>1.2 Security – Confidentiality, Integrity,<br/>availability, Identification, Authentication,<br/>Authorization, Accountability, Privacy</li> </ul> |                       |
| Chapter 2   | Cryptography  | 2                     |
|             | <ul><li>2.1 Techniques</li><li>2.2 Mathematical Foundation</li><li>2.3 Steam Ciphers</li><li>2.4 Block Ciphers</li><li>2.5 Crytanalysis</li></ul>   |                       |
| Chapter 3   | Symmetric/Secret Key Encryption   | 6                     |
|             | <ul><li>3.1 Algorithm Types and Modes</li><li>3.2 DES (Data Encryption Standard)</li><li>3.3 Double DES</li><li>3.4 Triple DES</li></ul>  |                       |

|            | 3.5 AES (Advanced Encryption Standard)<br>3.6 IDEA |    |
|------------|--|----|
|            | 3.7 Blowfish                                       |    |
|            | 3.8 RC5  |    |
| Chapter 4  | Public Key Encryption                              | 8  |
|            | 4.1Principles of public key crypto-systems         |    |
|            | 4.2 Mathematical Foundation                        |    |

#### **Progressive Education Society's**

# Modern College of Arts, Science and Commerce (Autonomous) Shivajinagar, Pune - 5 First Year of B.C. A. (Science) (2019 Course)

# Course Code : 19ScBCAU203 Course Name : Web Programming(PHP)-II

### Teaching Scheme: 4 Lectures/Week Examination Scheme: CIA : 50 Marks

Credits: 4 End-Sem : 50 Marks

#### **Prerequisites:**

- Basic knowledge in HTML tags & skill of creating web pages should be known
- Knowledge of basic Computer hardware & software is also necessary.

#### **Course Objectives:**

- Learn Core-PHP, Server Side Scripting Language
- Learn PHP-Database handling

#### **Course Outcomes:**

On completion of the course, student will be able to-

• To Design dynamic and interactive Web pages.

| Chapter | Title  | Number of<br>Lectures |
|---------|--|-----------------------|
| 1       | Introduction to Web Technologies   | 6                     |
|         | <ul> <li>1.1 HTTP basics, Introduction to Web server<br/>and Web browser</li> <li>1.2 Introduction to PHP</li> <li>1.3 What does PHP do?</li> <li>1.4 Lexical structure</li> <li>1.5 Language basics</li> </ul>  |                       |
| 2       | Function and String  | 4                     |
|         | <ul> <li>2.1Defining and calling a function</li> <li>2.2 Default parameters</li> <li>2.3 Variable parameters, Missing parameters</li> <li>2.4 Variable function, Anonymous function</li> <li>2.5 Types of strings in PHP</li> <li>2.6 Printing functions</li> <li>2.7 Encoding and escaping</li> <li>2.8 Comparing strings</li> <li>2.9 Manipulating and searching strings</li> <li>2.10 Regular expressions buttons, List box, radio, checkbox etc</li> </ul> |                       |
| 3       | Arrays   | 8                     |

|   | 3.1 Indexed Vs Associative arrays                |   |
|---|--|---|
|   | 3.2 Identifying elements of an array             |   |
|   | 3.3 Storing data in arrays                       |   |
|   | 3.4 Multidimensional arrays, Extracting multiple |   |
|   | values   |   |
|   | 3.5 Convertion between arrays and variables      |   |
|   | 3.6 Traversing arrays                            |   |
|   | 3.7 Sorting                                      |   |
|   | 3.8 Action on entire arrays                      |   |
|   | 3.9 Using arrays                                 |   |
| 4 | Databases (PHP-PostgreSQL)                       | 8 |
|   | 4.1 Using PHP to access a database               |   |
|   | 4.2 Relational databases and SQL                 |   |
|   | 4.3 PEAR DB basics                               |   |
|   | 4.4 Advanced database techniques                 |   |
| 5 | Handling email with PHP                          | 8 |
|   | 5.1 Email background                             |   |
|   | 5.2 Internet mail protocol                       |   |
|   | 5.3 Structure of an email message                |   |
|   | 5.4 Sending email with php                       |   |
|   | 5.5 Email attachments.                           |   |
|   | 5.6 Email id validation and verification         |   |
|   | 5.7 PHP error handling                           |   |
| 6 | PHP framework                                    | 5 |
|   | 6.1 Introduction to PHP framework.               |   |
|   | 6.2 Features, Applications.                      |   |
|   | 6.3 One example like JOOMLA, DRUPAL              |   |
| 7 | AJAX   | 8 |
|   | 7.1 Introduction of AJAX                         |   |
|   | 7.2 AJAX web application model                   |   |
|   | 7.3 AJAX – PHP framework                         |   |
|   | 7.4 Performing AJAX validation                   |   |
|   | 7.5 Handling XML data using php and AJAX         |   |
|   | 7.6 Connecting database using php and AJAX       |   |
| 8 | EXPERIENTIAL LEARNING                            | 1 |

| Sub:- Web Programming II   |                                      |  |
| Sr. No.                    | Topic of Assignment                  |  |
| 1.                         | String manipulation                  |  |
| 2.                         | Arrays                               |  |
| 3.                         | Function                             |  |
| 4.                         | Using object oriented concept        |  |
| 5.                         | File Handling                        |  |
| 6.                         | Form designing                       |  |
| 7.                         | Error handling in PHP                |  |
| 8.                         | Database Connectivity in PHP         |  |
| 9.                         | Sessions and cookies                 |  |
| 10.                        | Simple AJAX                          |  |
| 11.                        | AJAX validation                      |  |
| 12.                        | Handling XML data using PHP and AJAX |  |

#### Assignments on Advanced Operating system

| Sr. No. | Topic of Assignment  |
|---------|--|
| 1.      | Introduction to Linux (Using basic commands like cat with options, Is with options, cal, pwd, wc, grep with options, i/o redirection using >,>>,<,  etc) |
| 2.      | Creating a directory structure in Linux (Using commands mkdir,cd, rmdir, cp,mv etc.)   |

| 3.  | An interactive program that accepts month name and checks with current date if the person is late  |
|-----|--|
| 4.  | A command line program that accepts only two arguments and outputs sum and product of the two  |
| 5.  | Write a shell script to accept a file name, check if it is regular & show it's contents. (use cat command)   |
| 6.  | Write a shell script to display "Good Morning", "Good afternoon", and "Good evening" depending on the hour (use date command)  |
| 7.  | Write a shell script to accept argument string, and display present working directory if argument<br>string is "current", display parent directory if argument string is "parent" and display the contents<br>of root directory if argument string is "root" (use pwd, cd and ls command)                  |
| 8.  | Write a shell script which checks if any of the strings in the output of date command are present<br>in the dirfile  |
| 9.  | Write a shell script to print the information as to how many files and how many directories are present in current directory.  |
| 10. | Write a shell script that accepts name from the user and creates a directory by that name, then creates a text file in that directory and stores in it, the data accepted from user(till ^z), and displays the number of characters stored in the file. The program stops if directory name given is null. |
| 11. | Write a program to implement CPU scheduling algorithm.   |
| 12. | Write a program to implement memory management algorithm.  |
| 13. | Write a program to implement Banker's algorithm.   |

# Course Code : 19ScBCAU205 Course Name : Project

**Teaching Scheme: 4 Lectures/Week Examination Scheme: CIA : 50 Marks**  Credits: 4 End-Sem : 50 Marks

# **Guidelines for Project:**

- Students should prepare Project design using SE/UML techniques
- Contents of the Project Report:
- College certificate
- Acknowledgement
- Problem Definition
- Existing System and need for the new system
- Scope of the work
- Feasibility study (Including H/W & S/W setup requirements)
- Requirement Analysis (including fact finding methods used)
- E-R diagrams
- Decision trees/Decision tables
- Normalized Database Design & Data Dictionary.
- Data flow Diagrams (if applicable)
- Use-case Diagrams
- Class Diagrams
- Object Diagrams
- Sequence Diagrams
- Collaboration Diagram
- Activity Diagram
- State Chart (if applicable)
- Component Diagram
- Deployment Diagram (if applicable)
- Use interface design
- Testing & Implementation plan (Should contain testing strategies, techniques used & implementation approach used)
- User manual
- Drawbacks, Limitations & Proposed enhancement
- Abbreviations used (if any)
- Bibliography/Reference (Including book titles, authors name, editions, publications, etc)

### Course Code : 19ScCMAP206 (Elective)

## **Course Name : Soft Computing**

## **Teaching Scheme: TH:4Hours/Week Examination Scheme: CIA : 50 Marks**

Credits: 4 End-Sem : 50 Marks

Prerequisites:

#### **Knowledge of the following:**

- Probability
- First Order Predicate Logic
- Classical Logic

#### **Objective:**

• To understand the concepts of how an intelligent system work and its brief development process

#### **Course outcome:**

This course exposes learners to Neural Network, Fuzzy Logic and Genetic Algorithms, which are the major building blocks of Intelligent Systems

| Chapter No. | Title  | Number of<br>Lectures |
|-------------|--|-----------------------|
| 1           | Origins and issues   | 3                     |
|             | <ul> <li>1.1 Modern neuroscience</li> <li>1.2 Artificial Intelligence</li> <li>1.3 Classical AI and Neural Network</li> <li>1.4 Hybrid Intelligent Systems</li> <li>1.5 The human brain</li> <li>1.6 Biological neurons</li> </ul> |                       |
| 2           | Artificial neurons, neural network and architecture  | 5                     |
|             | <ul><li>2.1 Neuron abstraction</li><li>2.2 Neuron signal functions</li><li>2.3 Architectures: feed forward and feedback</li><li>2.4 Salient properties and application domains of neural networks</li></ul>                        |                       |

| 3 | Geometry of binary threshold neurons and their networks  | 5 |
|---|--|---|
|   | <ul> <li>3.1 Pattern recognition and data classification</li> <li>3.2 Convex sets, convex hulls and linear separability</li> <li>3.3 Space of Boolean functions</li> <li>3.4 Pattern Dichotomizers</li> <li>3.5 Capacity of a simple threshold logic neuron</li> <li>3.6 XOR problem</li> <li>3.7 Multiplayer networks</li> </ul>  |   |
| 4 | Perceptrons and LMS  | 5 |
|   | <ul> <li>4.1 Learning and memory</li> <li>4.2 From synopses to behaviour : The case of Aplysia</li> <li>4.3 Learning algorithms</li> <li>4.4 Error correction and gradient descent rules</li> <li>4.5 The learning objectives for TLNs</li> <li>4.6 Pattern space and weight space</li> <li>4.7 Perceptron learning algorithm</li> <li>4.8 MSE Error Surface and its Geometry</li> </ul> |   |
| 5 | Backpropagation  | 5 |
|   | <ul> <li>5.1 Multilayered Network Architecture</li> <li>5.2 Backpropagation Learning Algorithm</li> <li>5.3 Practical Considerations in implementing BP<br/>algorithm</li> <li>5.4 Applications of Feedforward Neural Networks</li> </ul>  |   |
| 6 | Foundations of Fuzzy Systems   | 5 |
|   | <ul> <li>6.1 From Crisp to Fuzzy Sets</li> <li>6.2 Representing Fuzzy Elements</li> <li>6.3 Basic Terms and Operations</li> <li>6.4 Properties of Fuzzy sets</li> <li>6.5 Fuzzy Measures</li> <li>6.6 Fuzzification</li> <li>6.7 The Extension Principle</li> <li>6.8 Alpha-cuts and the Resolution Principle</li> </ul>   |   |

# Course Code : 19ScCMAP207 (Elective)

# **Course Name : Grid and Cloud Computing**

# **Teaching Scheme: TH: 4Hours/Week Examination Scheme: CIA : 50 Marks**

Credit : 04 End-Sem : 50 Marks

#### **Prerequisites:**

#### **Objective:**

- Understand how Grid computing helps in solving large scale scientific problems
- Gain knowledge on the concept of virtualization that is fundamental to cloud computing
- Learn how to program the grid and the cloud
- Understand the security issues in the grid and the cloud environment

#### **Course outcome:**

At the end of the course, the student should be able to:

- Apply Grid Computing techniques to solve large scale scientific problems
- Apply the concept of virtualization
- Use the Grid and Cloud tool kits
- Apply the security models in the Grid and Cloud Environment

| Chapter No. | Title   | Number of<br>Lectures |

| 1           | Introduction  | 10                    |
|             | <ul> <li>1.1 Scalable computing over the Internet</li> <li>1.2 Technologies for network based systems</li> <li>1.3 Clusters of cooperative computers</li> <li>1.4 Grid computing Infrastructures</li> <li>1.5 Cloud computing</li> <li>1.6 Evolution of Distributed computing</li> <li>1.7 Scalable computing over the Internet</li> <li>1.8 Technologies for network based systems</li> <li>1.9 Clusters of cooperative computers</li> <li>1.10 Grid computing Infrastructures</li> <li>1.11 Introduction to Grid Architecture and standards</li> <li>1.12 Elements of Grid</li> <li>1.13 Overview of Grid Architecture</li> </ul> |                       |
| 2           | Grid services   | 8                     |

|   | <ul> <li>2.1 Introduction to Open Grid Services Architecture (OGSA)</li> <li>2.2 Functionality Requirements Practical and Detailed view of OGSA/OGSI</li> <li>2.3 Data intensive grid service models</li> <li>2.4 OGSA services</li> </ul>  |    |
|---|---|----|
| 3 | Virtualization  | 10 |
|   | <ul> <li>3.1 Cloud deployment models: public, private, hybrid, community</li> <li>3.2 Categories of cloud computing: Everything as a service: Infrastructure, platform, software – Pros and Cons of cloud computing</li> <li>3.3 Implementation levels of virtualization – virtualization structure – virtualization of CPU, Memory and I/O devices – virtual clusters</li> <li>3.4 Resource Management – Virtualization for data center automation</li> </ul>  |    |
| 4 | Programming Model   | 10 |
|   | <ul> <li>4.1 Open source grid middleware packages – Globus Toolkit<br/>(GT4) Architecture , Configuration – Usage of Globus – Main<br/>components and Programming model</li> <li>4.2 Introduction to Hadoop Framework – Mapreduce, Input<br/>splitting, map and reduce functions, specifying input and output<br/>parameters, configuring and running a job – Design of Hadoop<br/>file system</li> <li>4.3 HDFS concepts, command line and java interface, dataflow<br/>of File read &amp; File write</li> </ul> |    |
| 5 | Security  | 10 |
|   | 5.1 Trust models for Grid security environment –  |    |

1.Cloud Computing Bible, Barrie Sosinsky, Willey India Edition, ISBN: 9788126529803

2. Cloud Computing Principles and Paradigms, Rajkumar Buya, James Broberg, Andrzej, Wiley, 2011,

### ISBN: 0470887990

3. Grid Computing, Joshy Joseph, Craig Fellenstein, Person Education, Person Eductaion, ISBN: 978-81-

317-0885-9
